

Zinc from 30 to 35 cts. per square foot is generally used for roofing, which costs at least one-third cheaper than slate coverings, and the ship sheathing, which lasts from five to six years, costs two-thirds cheaper than copper or yellow metal. And if the same coverings are made of the Videira manganese Zinc, and under the supervision of Mr. FREDERICK BROWN, the manager of the company, the economy is still more marked, as a guarantee of the purity of his durability. For further particulars, and to apply to Mr. H. P. McMILLAN, General Agent for England, the Company's Office, 20, 15, Manchester Buildings, Westminster Bridge, London.
